## Trabalho de Matemática Concreta

- Resultado do trablaho de comparação de duas listas usando métodos diferentes:
  - Comparando elemento a elemento de forma randômica
  - Comparando elemento a elemento em ordem crescente de índice

```
In [23]:
          import matplotlib.pyplot as plt
In [24]:
          def comparaSequenciasAleatoriamente():
              from random import randint
              global sequenciaA, sequenciaB
              indicesJaSorteados = []
              comandos = 0
              while True:
                  indiceAleatorio = randint(0,99)
                  while indiceAleatorio in indicesJaSorteados:
                      indiceAleatorio = randint(0,99)
                  indicesJaSorteados.append(indiceAleatorio)
                  comandos += 1
                  if sequenciaA[indiceAleatorio] != sequenciaB[indiceAleatorio]:
                      break
              return comandos
```

```
